VI **GUILLEMIN,** Ernst Adolph. Elektrotechn. — 1922–24 Assist. Electrical Engineering, '27–28 Instructor, '28–36 Assist. Prof., '36–44 Assoc. Prof., '44–63 Prof., '63– Prof. Emeritus, Massachusetts Inst. of Technol., Cambridge, Mass. — '48 Certificate of Merit (U. S. Medal for Merit Board); '61 Medal of Honor (Inst. Radio Engineers); '62 Medal for Engineering Education (Amer. Inst. Electrical Engineers).

*1898, Mai 8, Milwaukee, Wis.

**Zur Biogr.** Electronic News 6 ('61) März-Nr. (m. Bildn.).

**S.** Proc. Symposium on active networks and feedback systems, New York 1960 (New York '61) (Brooklyn Polytechnic Inst., Microwave Research Inst., Symposia ser., 10): Topology and linear transformation theory in active network synthesis.

**W.** Communication networks **1**: The classical theory of lumped constant networks (New York–London '31) 425 S.; **2**: The classical theory of lines, cables, and filters ('35) 589 S. — Mathematics of circuit analysis; extensions to the mathematical training of electrical engineers (New York–London '49) 14 + 590 S.; deutsch: Mathematische Methoden des Ingenieurs (München–Wien '66) 654 S. — Introductory circuit theory (New York '53, London '54) 25 + 550 S. — Synthesis of passive networks; theory and methods appropriate to the realization and approximation problems (New York–London '57) 741 S. — Theory of linear physical systems; theory of physical systems from the viewpoint of classical dynamics, including Fourier methods (New York–London '63) 17 + 586 S.

**Advances Electronics** A summary of modern methods of network synthesis: **3** ('51).

**IRE Trans.** What is nature's error criterion?: **CT-1** ('54) Nr. 1. — The Fourier integral: a basic introduction: **CT-2** ('55) Nr. 3, 227–30. — Evaluation of Fourier transforms[4])[5]): Nr. 3. — A new approach to the problem of cascade

synthesis: Nr. 4. — Transformation theory applied to linear active and/or non-bilateral networks: **CT-4** ('57) Nr. 3, 105–11. — How to grow your own trees from cut-set or tie-set matrices: **CT-6** ('59) Spec. Suppl. May, 110–26. — On the analysis and synthesis of single-element-kind networks: **CT-7** ('60) 303–12. — An approach to the synthesis of linear networks through use of normal co-ordinate transformations leading to more general topological configurations: Spec. Suppl. Aug., 40–48. — On the realization of an $n^{th}$-order G matrix: **CT-8** ('61) 318–23.

**Isis** Early developments in electromagnetic theory. With two unpublished letters by A. M. Ampère: **18** ('32) 118–26.

**J. Math. and Physics** A recent contribution to the design of electric filter networks: **11** ('31/32) 150–211. — Synthesis of RC-networks: **28** ('49) 22–42. — The normal co-ordinate transformation of a linear system with an arbitrary loss function: **39** ('60) 97–104.

**Proc. IRE** A note on the ladder development of RC-networks: **40** ('52) 482–85. — Design considerations of junction transistors at higher frequencies, based upon an accurate equivalent circuit[3])[2]): **42** ('54) 1620–28. — Minimum insertion loss filters[1]): **47** ('59) 37–41. — Teaching of circuit theory and its impact on other disciplines: **50** ('62) 872–78.

**Proc. nation. Electronics Conf.** An introduction to the modern filter theory: **9.** 1953 ('54) 327–41. — Design considerations of junction transistors at higher frequencies, based upon an accurate equivalent circuit[3])[2]): **10.** 1954 ('55) 636–51.

**Quarterly Progr. Rep., Res. Labor. Electronics, MIT** Some generalizations of linear network analysis that are useful when active and/or nonbilateral elements are involved: **46** ('57) 103–14. — Derivation of Hilbert transforms and the Paley-Wiener criterion from Cauchy's integral formula: 114–20. — An independent proof of the Darlington theorem: 120–22. — On the analysis and synthesis of single-element-kind networks: **56** ('60) 213–. — The normal co-ordinate transformation of a linear system with an arbitrary loss function: 235–. — On the realization of an $n^{th}$-order G matrix: **58** ('60) 261–73. — Realization of an open-circuit resistance matrix: **60** ('61) 239–48. — A normal co-ordinate transformation for an arbitrary linear passive network on loop or node basis and its geometrical interpretation: 248–59.

**Technical Rep., Res. Labor. Electronics, MIT** Computational techniques which simplify the correlation between steady-state and transient response of filters and other networks: Nr. **268** ('53) 19 S.

Mit: [1]) E. G. Fubini; [2]) R. A. Pucel; [3]) H. Statz; [4]) W. K. Linvill; [5]) R. E. Scott.
